

Masking Film

The main area of activity of the company is manufacturing of PE masking film.

The masking film is designed for the auto painting section.

The PE film is transparent in order to facilitate cutting it at the edge of the painting surface. It is electrostatically loaded for fast adhesion on the surface, preventing small particles from reaching the unprotected areas.

The film is folded in “M” shape and rolled on cardboard tube, its length not exceeding 95 cm. It is rolled so that a single person could unroll, unfold and cut it.

Film packing is done in 2 ways:

- Individual packing (in individual cardboard box for each film roll)
- Pallet packing (in container boxes for pallets).

Material:	PE
Standard Sizes:	4m x 150m; 4m x 200m; 4m x 300m
Standard thickness:	10μ
Treatment:	Complete electrostatic charge and corona treatment for a strong adhesion of the paint
Use:	Auto painting
Color:	Transparent
Print:	Printed logo
Folding:	Double
Packing:	1 roll/individual box; container box for pallet
